# EVM Scalability

- What does EVM look like when not driven by the EVMS DFARS Clause?
  - What goes away? What remains the same?
  - Do you 'scale' Guidelines (e.g. delete adherence) or other?
- How do we effectively manage programs in an environment of ever-shrinking support staff budgets (ie., PMO, Scheduling, Finance)?
- What key EVM data points are necessary to achieve an 80% answer on program performance?
- How do we leverage portfolio project management capabilities in an EVM driven environment?
- If EVM is not the solution, then what are other viable methodologies?
